APO	0.027	[-0.073 - 0.127]	a
Control	0.056	[-0.044 - 0.156]	ab
BOA	0.214	[0.114 - 0.314]	b

 $<sup>^1\</sup>mathrm{Different}$  letters indicate significant differences within one Syncom / Timepoint combination (alpha = 0.05), Tukey adjusted

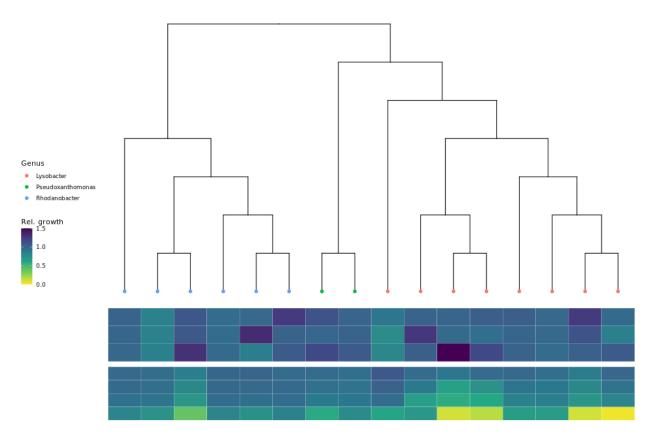

# Supplemental Table 9. Correlation between change in relative abundance and change in growth

r2	Treatment		
log2FC vs absolute AUC			
0.01983379	APO		
-0.01052433	BOA		
log2FC vs relative AUC			
0.01071874	APO		
0.01237386	BOA		

#### **Figures**

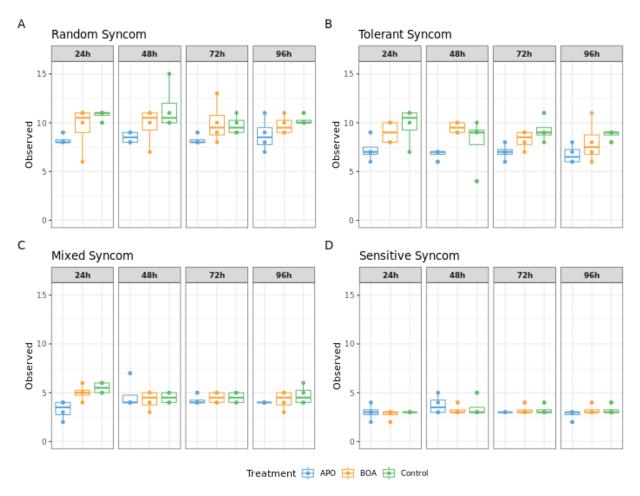

#### Supplemental Figure 1

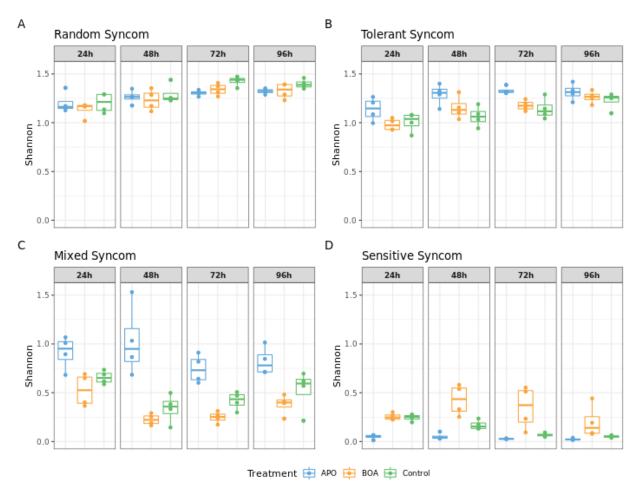

Supplemental Figure 1. Bx sensitivity of Xanthomonadales. Genera belonging to the Order Xanthomonadales are plotted. The tree was constructed from concatenated sequences (see methods). The upper 3 rows of the heatmap display relative growth in  $10\mu M$ ,  $50\mu M$  and  $100\mu M$  BOA (top to bottom), the lower four rows of the heatmap relative growth in medium supplemented with  $1\mu M$ ,  $5\mu M$ ,  $10\mu M$  and  $50\mu M$  APO.

#### Supplemental Figure 2

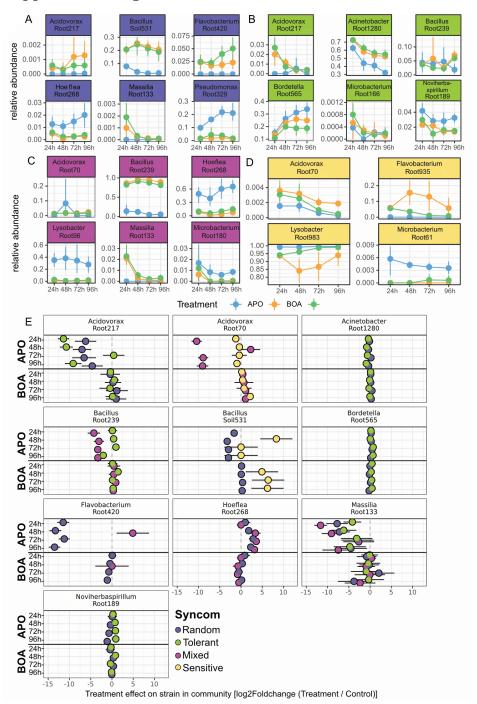

Supplemental Figure 2. Observed alpha diversity. The number of observed bacterial genera of the samples belonging to the four different syncoms (A-D) is shown for each time point (facet) and treatment (color). Each sample is plotted as a dot, and box-and-whisker plots show the summary statistics for each treatment / time point combination.

#### Supplemental Figure 3

Supplemental Figure 3. Shannon diversity indices of the synthetic communities. The Shannon indices of the samples belonging to the four different syncoms (A-D) are shown for each time point (facet) and treatment (color). Each sample is plotted as a dot, and box-and-whisker plots show the summary statistics for each treatment / time point combination.

#### Supplemental Figure 4

Supplemental Figure 4. Changes in relative abundance by community. A-D The relative abundance over time for different isolates that showed signficant differences in relative abundance at at least one timepoint (compared to control). Relative abundance is shown per treatment and timepoint, errorbars indicate 95% CI. E Changes in relative abundance per treatment and timepoint for isolates that were found in more than one community. Errorbars indicate s.e. of the log2Foldchange.
